

DownscopedClient::request

```
graph LR; A[DownscopedClient::request] --> B[DownscopedClient::request Async]; B --> B;
```

The diagram illustrates a sequence of operations. It begins with a call to the `DownscopedClient::request` method, represented by a white box. This call leads to an asynchronous execution of the same method, represented by a grey box labeled `DownscopedClient::request Async`. A blue arrow points from the first box to the second. Additionally, a curved blue arrow loops back from the top of the grey box to its top edge, indicating a self-loop or a recursive call within the asynchronous process.
