

authclient_1::AuthClient

```
classDiagram
    class authclient_1__AuthClient {
    }
    class PassThroughClient {
        +request()
        +getAccessToken()
        +getRequestHeaders()
    }
    authclient_1__AuthClient <|-- PassThroughClient
```

The diagram illustrates a class hierarchy. At the top is the 'authclient_1::AuthClient' class, represented by a white box with a black border. Below it is the 'PassThroughClient' class, represented by a grey box with a black border. A blue arrow with an open triangular head points from the 'PassThroughClient' class up to the 'authclient_1::AuthClient' class, indicating that 'PassThroughClient' inherits from 'authclient_1::AuthClient'.

PassThroughClient

+ request()

+ getAccessToken()

+ getRequestHeaders()
