

loadFileDescriptorSetFrom
Buffer

loadFileDescriptorSetFrom
Object

createPackageDefinitionFrom
DescriptorSet

```
graph LR; A[loadFileDescriptorSetFrom Buffer] --> C[createPackageDefinitionFrom DescriptorSet]; B[loadFileDescriptorSetFrom Object] --> C;
```

The diagram illustrates a process flow where two different loading methods for a descriptor set (from a buffer or an object) both lead to the same subsequent step: creating a package definition from that descriptor set. The output step is highlighted with a gray background.
