

protobuf::Root

```
classDiagram
    class protobufRoot["protobuf::Root"]
    class GoogleProtoFilesRoot
    GoogleProtoFilesRoot --|> protobufRoot
```

The diagram illustrates an inheritance relationship. At the bottom is the 'GoogleProtoFilesRoot' class, which is shaded gray and contains three public methods: '+ constructor()', '+ resolvePath()', and '+ _findIncludePath()'. A blue arrow with an open triangular head points from the top of the 'GoogleProtoFilesRoot' class to the bottom of the 'protobuf::Root' class, indicating that 'GoogleProtoFilesRoot' inherits from 'protobuf::Root'. The 'protobuf::Root' class is shown as a white box with two empty internal compartments.

GoogleProtoFilesRoot

+ constructor()

+ resolvePath()

+ _findIncludePath()
