

combineLatestInit

combineLatestInit

maybeSchedule

```
graph LR; A[combineLatestInit] --> C[maybeSchedule]; B[combineLatestInit] --> C;
```

The diagram illustrates a flow where two separate 'combineLatestInit' operations feed into a single 'maybeSchedule' operation. The 'combineLatestInit' boxes are white with black borders, while the 'maybeSchedule' box is gray with a black border. Blue arrows indicate the direction of the flow from left to right.
