

AppCheckApiClient::
exchangeToken

AppCheckApiClient::
verifyReplayProtection

AppCheckApiClient::
toFirebaseError

```
graph LR; A[AppCheckApiClient::exchangeToken] --> C[AppCheckApiClient::toFirebaseError]; B[AppCheckApiClient::verifyReplayProtection] --> C;
```

The diagram illustrates a mapping or transformation process. On the left, two white rectangular boxes represent source methods: 'AppCheckApiClient::exchangeToken' (top) and 'AppCheckApiClient::verifyReplayProtection' (bottom). On the right, a gray rectangular box represents the target method: 'AppCheckApiClient::toFirebaseError'. Two blue arrows originate from the right side of the source boxes and point towards the left side of the target box, indicating that both source methods are mapped to or transformed into the target method.
